ROBERT ADAMS

RESOURCES FOR EDUCATION AND ACTION FOR COMMUNITY HEALTH IN AMBLER (REACH Ambler)

Transcript of an Interview Conducted by

Lee Sullivan Berry

at

Wissahickon Valley Watershed Association Ambler, Pennsylvania

on

22 November 2013

(With Subsequent Corrections and Additions)

ACKNOWLEDGEMENT

This oral history was conducted as part of a joint project of the Chemical Heritage Foundation and the University of Pennsylvania School of Medicine. This project was supported by the Office of the Director, National Institutes of Health under Award Number R25OD010521-01.

THE CHEMICAL HERITAGE FOUNDATION Center for Oral History

Title of the Research Study: Resources for Education and Action for Community Health in Ambler Protocol Number: 817669

Principal Investigator: (name, address, phone and email) Frances K. Barg, PhD, Anatomy Chemistry 141-2, 215-746-1830, fran.barg@uphs.upenn.edu

Co-investigator: (name, address, phone and email): Jody Roberts, PhD, Chemical Heritage Foundation—315 Chestnut Street, Philadelphia, PA, 215-873-8281, jroberts@chemheritage.org

Emergency Contact: (name, address, phone and email): Frances K. Barg, PhD, Anatomy Chemistry 141-2, 215-746-1830, fran.barg@uphs.upenn.edu

FINAL RELEASE FORM

This document contains my understanding and agreement with the Chemical Heritage Foundation with respect to my participation in the audio- and/or video-recorded interview conducted by Lee Berry on <u>22 November 2013</u>. I have read the transcript supplied by the Chemical Heritage Foundation.

- 1. The recordings, transcripts, photographs, research materials, and memorabilia (collectively called the "Work") will be maintained by the Chemical Heritage Foundation and made available in accordance with general policies for research and other scholarly purposes.
- 2. By signing this document, you will grant, assign, and transfer to the Chemical Heritage Foundation all right, title, and interest in the Work, including the literary rights and the copyright. Participants retain the right to copy, use, and publish the Work in part or in full until their death.
- 3. The manuscript may be read and the recording(s) heard/viewed by scholars approved by the Chemical Heritage Foundation unless restrictions are placed on the transcript as listed below.

By signing this document, you are agreeing that this constitutes your entire and complete understanding.

Harris (Hot all and (Signature) Robert Adams an ann an Alter anns (Date) 12/18/13

OPTIONAL: If you wish to place the following restrictions on the use of your interview, please indicate below:

Regardless of any restrictions that may be placed on the transcript of the interview, the Chemical Heritage Foundation retains the rights to all materials generated about your oral history interview, including the title page, abstract, table of contents, chronology, index, et cetera (collectively called the "Front Matter and Index"), all of which will be made available on the Chemical Heritage Foundation's website. Should the Chemical Heritage Foundation wish to post to the Internet the content of the oral history interview, that is, direct quotations, audio clips, video clips, or other material from the oral history recordings or the transcription of the recordings, the Chemical Heritage Foundation will be bound by the restrictions for use placed on the Work as detailed above. Should the Chemical Heritage Foundation wish to post to the Internet the entire oral history interview during your lifetime, you will have the opportunity to permit or deny this posting.

The Chemical Heritage Foundation will enforce my wishes until the time of my death, when any restrictions will be removed.

This interview has been designated as Free Access.

Please note: Users citing this interview for purposes of publication are obliged under the terms of the Chemical Heritage Foundation (CHF) Center for Oral History to credit CHF using the format below:

Robert Adams, interview by Lee Sullivan Berry at Wissahickon Valley Watershed Association, Ambler, Pennsylvania, 22 November 2013 (Philadelphia: Chemical Heritage Foundation, Oral History Transcript # 0811).

Chemical Heritage Foundation Center for Oral History 315 Chestnut Street Philadelphia, Pennsylvania 19106

The Chemical Heritage Foundation (CHF) serves the community of the chemical and molecular sciences, and the wider public, by treasuring the past, educating the present, and inspiring the future. CHF maintains a world-class collection of materials that document the history and heritage of the chemical and molecular sciences, technologies, and industries; encourages research in CHF collections; and carries out a program of outreach and interpretation in order to advance an understanding of the role of the chemical and molecular sciences, technologies, technologies, and industries in shaping society.

ABSTRACT

Robert Adams grew up in Gladwyne, Pennsylvania, always interested in the outdoors. As a student at the Ambler campus of Temple University with a major in urban studies and environmental science, he became familiar with the "White Mountains" of Ambler, the piles of asbestos-containing waste material. His first official interaction with the area was as land manager for the Wissahickon Valley Watershed Area (WVWA), where his responsibilities centered on the Green Ribbon Trail and included removing invasive species, restoring wetland, and cleaning up woods and stream. As Director of Stewardship, he now also manages six preserves.

By the time Adams began working for WVWA—twenty years after his college years in Ambler-the U.S. Environmental Protection Agency (EPA) had completed the capping of the White Mountains. The BoRit site had been mostly ignored until a developer wanted to build a seventeen-story high-rise near the McDonald's. Ambler's residents objected strongly to such a large building in their small town; the Borough Council wanted the revenue; The WVWA, hoping to buy a reservoir located in the middle of the site, was concerned about proper remediation. The loud and angry debate that ensued forced the Council to undertake its own feasibility study; this study found the project's expense prohibitive, and the project was dropped. Meanwhile, however, residents realized that the site was full of hazardous asbestos-containing waste, and, led by Sharon McCormick, they formed a protest group called Citizens for a Better Ambler. The EPA also took note of the hazard and formed a community advisory group (CAG), the BoRit CAG, of which Adams was elected co-chair. Many of the members of Citizens for a Better Ambler became the nucleus of the BoRit CAG. As a result of the CAG BoRit has been added to the EPA's Superfund National Priorities List, and a remediation study is ongoing. After the remediation study there will be a feasibility study and then the actual remediation; all of this, Adams forecasts, will mean a further ten or twenty years before the site is finished.

Adams contrasts Ambler today with the Ambler of his college years. Then the plant had closed, people were unemployed, and businesses were shut down. Ambler was not a happy place. Perhaps at least in part because of the activism inspired by that long-ago seventeen-story high-rise project that never happened, Ambler now is becoming revitalized; the organization Main Street is helping foster business, restaurants, and tourism. Adams believes the Borough is well managed and that Ambler is now a very nice place to live. He hopes that the BoRit site, which is now fenced off, can eventually be more accessible to the residents. He says that other communities might take Ambler's experience as a call to pay attention to their environments.

INTERVIEWER

Lee Sullivan Berry earned a master's degree in medieval studies from the University of Notre Dame, and a bachelor of arts degree in religious studies from the University of Pennsylvania. As a staff member in the Center for Oral History, Berry conducts background research and oral-history interviews, edits transcripts of completed interviews, and coordinates with interviewers and interviewees to finalize transcripts. She was the lead interviewer for the REACH Ambler project and has presented her work at meetings of the American Society for Environmental History and Oral History in the Mid-Atlantic Region.

TABLE OF CONTENTS

Biographical Information Childhood in Gladwyne, Pennsylvania. Undergraduate degree from Temple University, Ambler campus. Majored in geography and urban studies/environmental studies. Lived in Ambler, Pennsylvania, for two years as undergraduate; biked past White Mountains almost daily. Twenty years working in other fields.	1
Beginning with Wissahickon Valley Watershed Area (WVWA) Land manager with Wissahickon Valley Watershed Area (WVWA). Worked mostly in Ambler area but also in larger Wissahickon Valley watershed. Green Ribbon Trail his main responsibility. Also managed six preserves; work entailed ecological restoration, deer population control, invasive species removal, wetland restoration, in- stream work. Funding. Employees and volunteers.	6
BoRit Superfund Site Community Advisory Group (CAG) BoRit mostly ignored until seventeen-story high-rise mooted. Remediation too costly for high-rise, but Environmental Protection Agency (EPA) called in. Portion of the site bought by WVWA. Wissahickon Waterfowl Preserve established. BoRit Community Advisory Group formed by EPA and community, especially Sharon McCormick. Adams elected co-chair of CAG. CAG meetings, workings; community participation.	9
Remediation Types of remediation; their costs and benefits. Capping for White Mountain; site now ninety-five percent safer. Citizens for a Better Ambler formed. BoRit now on EPA's National Priorities List. Informing and involving local residents.	15
General Observations Ambler now a good place to live. General challenges for Ambler: continuing economic recovery and development; improving Whitpain Park further; making Wissahickon Waterfowl Preserve more accessible. Points out that remediation study still not complete; then feasibility study necessary; will be ten or twenty years before remediation complete. Lesson for other communities: pay attention.	22
