

CHEMICAL HERITAGE FOUNDATION

**PAUL K. HANSMA**

Transcript of Interviews  
Conducted by

Cyrus Mody

at

Santa Barbara, California

on

2 May and 7 August 2006

(With Subsequent Corrections and Additions)

## ACKNOWLEDGEMENT

This oral history is part of a series supported by the Center for Nanotechnology in Society (CNS), University of California, Santa Barbara, under the National Science Foundation Grant No. SES 0531184. Scholars and other people using this interview should acknowledge in all written publications. Any opinions, findings, and conclusions or recommendations expressed in this material are those of the interviewee and interviewer and do not necessarily reflect the views of the National Science Foundation.

This oral history series is an important resource for the history of nanotechnology, documenting the lives and career of key scientists and engineers that shaped and contributed to the contemporary practice of science and technology.

CHEMICAL HERITAGE FOUNDATION  
Oral History Program  
FINAL RELEASE FORM

This document contains my understanding and agreement with Chemical Heritage Foundation with respect to my participation in the audio-recorded interview conducted by

Cyrus Mody on 2 May and 7 August 2006.  
I have read the transcript supplied by Chemical Heritage Foundation.

1. The audio recording, corrected transcript, photographs, and memorabilia (collectively called the "Work") will be maintained by Chemical Heritage Foundation and made available in accordance with general policies for research and other scholarly purposes.
2. I hereby grant, assign, and transfer to Chemical Heritage Foundation all right, title, and interest in the Work, including the literary rights and the copyright, except that I shall retain the right to copy, use, and publish the Work in part or in full until my death.
3. The manuscript may be read and the audio recording(s) heard by scholars approved by Chemical Heritage Foundation subject to the restrictions listed below. The scholar pledges not to quote from, cite, or reproduce by any means this material except with the written permission of Chemical Heritage Foundation.
4. I wish to place the conditions that I have checked below upon the use of this interview. I understand that Chemical Heritage Foundation will enforce my wishes until the time of my death, when any restrictions will be removed.

**Please check one:**

a.  \_\_\_\_\_

**No restrictions for access.**

**NOTE:** Users citing this interview for purposes of publication are obliged under the terms of the Chemical Heritage Foundation Oral History Program to obtain permission from Chemical Heritage Foundation, Philadelphia, Pennsylvania.

b. \_\_\_\_\_

**Semi-restricted access.** (May view the Work. My permission required to quote, cite, or reproduce.)

c. \_\_\_\_\_

**Restricted access.** (My permission required to view the Work, quote, cite, or reproduce.)

This constitutes my entire and complete understanding.

This interview has been designated as **Free Access**.

One may view, quote from, cite, or reproduce the oral history with the permission of CHF.

**Please note:** Users citing this interview for purposes of publication are obliged under the terms of the Chemical Heritage Foundation Oral History Program to credit CHF using the format below:

Paul K. Hansma, interview by Cyrus Mody at Santa Barbara, California, 2 May and 7 August 2006 (Philadelphia: Chemical Heritage Foundation, Oral History Transcript # 0345).

Chemical Heritage Foundation  
Oral History Program  
315 Chestnut Street  
Philadelphia, Pennsylvania 19106

The Chemical Heritage Foundation (CHF) serves the community of the chemical and molecular sciences, and the wider public, by treasuring the past, educating the present, and inspiring the future. CHF maintains a world-class collection of materials that document the history and heritage of the chemical and molecular sciences, technologies, and industries; encourages research in CHF collections; and carries out a program of outreach and interpretation in order to advance an understanding of the role of the chemical and molecular sciences, technologies, and industries in shaping society.

## PAUL K. HANSMA

1946 Born in Salt Lake City, Utah on 28 April

### Education

1967 B.A., physics, New College  
1968 M.A., physics, University of California, Berkeley  
1972 Ph.D., physics, University of California, Berkeley

### Professional Experience

University of California, Santa Barbara  
1972-1976 Assistant Professor, Physics Department  
1976-1980 Associate Professor, Physics Department  
1980-present Professor, Physics Department  
1994-1997 Co-Chair of Physics Department

*Nanotechnology*  
1989-present Editorial Board Member

Arizona State University  
1997-present Advisory Board for Interactive Nano-visualization in Science and Engineering Education (INVSEE) program

*Review of Scientific Instruments*  
1999-present Editorial Board member

### Honors

1964 Presidential Scholar (presented by President Johnson)  
1967-1971 Fellow, National Science Foundation  
1975-1977 Fellow, Alfred P. Sloan Foundation  
1983 Professor of the Year, University of California, Santa Barbara  
1988 Distinguished Teaching Award, University of California, Santa Barbara  
1988 International Advisory Committee, Scanning Tunneling Microscopy  
1989 Fellow, American Physical Society  
1990 Fellow, American Association for the Advancement of Science  
1990-1993 Executive Committee, Division of Chemical Physics, American Physical Society

1991	Paul E. Klopsteg Award, American Association of Physics Teachers
1993	Max Planck Research Award
2000	Biological Physics Prize, American Physical Society
2004	Fellow, Institute of Physics

## ABSTRACT

**Paul K. Hansma** begins the interview by describing his childhood and early interest in building projects. After obtaining his undergraduate degree from New College, Hansma enrolled in the University of California at Berkeley to study condensed matter physics under Gene Rochlin. Upon completing his thesis on externally shunted Josephson Junctions, Hansma accepted a faculty position at the University of California at Santa Barbara and worked on squeezable electron tunneling junctions. It was at that time Hansma heard a lecture by Gerd Binnig on a new technique called scanning tunneling microscopy [STM]. Frustrated by the lengthy time requirements to set up each trial, Hansma began to move away from ultra-high vacuum equipment into STMs that would function in air and liquids. Hansma divided the labor between graduate students, technician Barney Drake, and himself and began building STMs, including the first one to achieve atomic resolution in water. Then, a conference at Cancun, Mexico served as a major impetus for information exchange and helped many groups to achieve atomic resolution. Soon after, at the request of colleague, Calvin Quate, Hansma reviewed a paper on atomic force microscopy [AFM]. The concept intrigued Hansma and he began to shift his research from STM to AFM. After building many iterations of AFMs, Hansma set up a research agreement with Digital Instruments' founder Virgil Elings to receive prototype instruments in exchange for consultation. Hansma concludes the interview by offering insights on the impact of the UCSB Materials Research Laboratory; thoughts on the nanotechnology community; and his current research on bone diagnostic instruments.

## INTERVIEWER

**Cyrus Mody** is an Assistant Professor of History at Rice University. Prior to that position he was the manager of the Nanotechnology and Innovation Studies programs in the Center for Contemporary History and Policy at the Chemical Heritage Foundation. He has a bachelor's degree in mechanical and materials engineering from Harvard University and a Ph.D. in science and technology studies from Cornell University. He was the 2004-2005 Gordon Cain Fellow at CHF before becoming a program manager. Mody has published widely on the history and sociology of materials science, instrumentation, and nanotechnology.

## TABLE OF CONTENTS

Images	
i	Different iterations of AFM
ii	First AFM to image samples in water
iii	Daughter Joy Hansma and bungee cord suspended AFM
iv	Prototype of Digital Instruments' Dimension AFM
1	Family History and Early Life Experiences Aspiration to be an athlete during childhood. Injury and shift towards the sciences during high school. Early proficiency in tinkering and building projects.
3	Undergraduate Education Deciding to major in physics and attending New College. Difficulties with attending a newly found college. Learning from mentors and deciding to go to graduate school.
6	Graduate Education Attending UC Berkeley and studying under Gene Rochlin. The influence of John Clarke and studying superconducting Josephson effect. Being part of the superconductivity community and learning its dynamics. Working with Josephson tunneling junctions.
11	Early work at UC Santa Barbara Learning about scanning tunneling microscopes [STM] from Gerd Binnig. Fostering multidisciplinary research and collaborations. Squeezable electron tunneling junction work.
22	Building STMs Shifting research direction away from ultra high vacuum and into air and liquid. Development of the STM community. Challenges and division of labor in building an STM. Role of graduate students and post-docs. First conference in Cancun, Mexico. Information exchange between pioneering researchers. DNA research using STM.
41	Working on atomic force microscopes [AFM] Reviewing a paper for Calvin Quate that lead to interest in AFM. Building iterations of instruments. Gathering student feedbacks. Grants and funding sources. Setting up research agreement with Virgil Elings and Digital Instruments to commercialize AFMs. Spreading the use of AFM through post-docs from different disciplines.

66	Concluding Thoughts Impact of the UCSB Materials Research Laboratory. Thoughts on the nanotechnology community. Shifting research direction towards bone diagnostic instruments.
